

BE PREPARED

Be Prepared: Emergency Planning

Before a power outage happens, be prepared:

- Make a plan of action with everyone in your household.
- Create a **Family Emergency Kit**.
- Regularly check the batteries in your smoke detectors.
- Protect electrical equipment by installing surge protectors.
- Make sure the water lines under your home are properly insulated.
- Like NTPC Northwest Territories Power Corp on Facebook or follow @NTPC_News on Twitter.
- Get a phone that connects directly into the phone jack that does not have an electrical cord – it will work during a power outage. Sensitive equipment and electronics should be plugged into a surge protector.

Be prepared for a minimum of 72 hours. Put together a *Family Emergency Kit* with the following items:

- Flashlights and batteries (or a hand cranked flashlight)
- Radios and batteries (or a hand cranked radio or car radio)
- Warm clothing and blankets
- Candles and matches (protect from children)
- Non-perishable and ready-to-eat foods
- Bottled water
- Manual can opener
- First Aid kit
- Games, cards, and books
- Emergency contact numbers

Even without an emergency situation being declared, a long power outage in -30 C or colder weather can cause damage to your home and may impact your regular routine.

When the Power Goes Off

Check whether the power failure is limited to your home. If your neighbors' power is still on, check your circuit breakers or fuse box. If the power outage is neighbourhood-wide, call Northland Utilities (day: 867-873-4865; Emergency 24h: 1-877-642-8802) about the outage so they can send the right crews and equipment to the right location.

During a power outage:

- Turn off all lights except for one inside and one outside your home.
- Turn off or unplug your appliances and entertainment units. Unplug appliances that generate heat.
- Never use a camp stove, barbecue, or propane/kerosene heater indoors. Deadly odourless carbon monoxide gases can build up and kill you.
- Candles can be a fire hazard. Flashlights are a better alternative.

Protect Your Plumbing

Water in pipes or toilet bowls may freeze during a long cold-weather power outage. Your house will cool from the top down. This means that toilets and plumbing on upper floors are more vulnerable. If the outage is a shorter one, leaving a tap running slowly will keep water moving in the system.

Keep the Water Moving

The City's water supply is powered by backup generators to make sure it continues to flow during a power outage. Most homes in Yellowknife have dual water lines connected to a circ pump.

When the power goes out, it is important to draw water from both water lines in order to prevent a freeze up. For detailed information, read the City's Water Line Freeze Protection brochure at yellowknife.ca.

Heat Sources

1. Propane Stove

If you have a propane powered stove, you can turn on a burner to warm water, but do not use it to heat your house. Never use any propane heaters or barbecues inside your home for heat because they emit carbon monoxide, a harmful and potentially deadly gas.

2. Propane Fireplace

Most new propane fireplace models will function without power. Their fans won't work, but most generate enough radiant heat to make a difference.

3. Woodstove

If you have a woodstove, set aside some firewood as part of an emergency pile. Energy-efficient fireplaces and stoves are a safer and more efficient choice. A new woodstove is an excellent heat source. Heat-generated fans can be placed on top of the woodstove to direct hot air within your home.

4. Pellet Stove

If you own a pellet stove, have a back-up power system or battery that you can plug the stove into, so your pellet auger and fan continue to operate.

After an Outage

- Expect a momentary power fluctuation when electricity is restored.
- Check your refrigerator and freezer to make sure they have power. Dedicated circuit breakers for larger appliances may trip when the power goes out.
- Turn on or plug in your appliances after 15 minutes.

Emergency Information

Record the details of your family's emergency plan below. Make sure every member of your household knows where to find it.

Emergency Meeting Place (outside the home)

Location: _____

Family Doctor

Doctor's Name: _____

Doctor's Phone Number: _____

Prescriptions: _____
